PROJECTS

PROJECTS

January 2026 - Present

Task & Expense Tracker API | GitHub | Live Demo

Designed and built a RESTful API for personal task and expense management with JWT-based authentication and PostgreSQL persistence via Entity Framework Core. Deployed using Docker on Railway with full Swagger/OpenAPI documentation.

ASP.NET Core · Entity Framework Core · PostgreSQL · JWT Auth · Docker

E-Commerce Microservices Platform | GitHub | Product Service · Order Service

Architected a distributed e-commerce system with independently deployable Product, Order, and Notification services communicating asynchronously via RabbitMQ (MassTransit). Implemented polyglot persistence (MongoDB, PostgreSQL) with Redis caching; containerized all services and deployed to Railway.

ASP.NET Core · MassTransit/RabbitMQ · MongoDB · PostgreSQL · Redis · Docker

Clean Architecture Bookstore API | GitHub | Live Demo
Built a bookstore management API following Clean Architecture principles with strict layer separation (Domain, Application, Infrastructure, API). Implemented CQRS using MediatR, domain-driven entity design with a Result pattern for error handling, and JWT authentication.
ASP.NET Core · Clean Architecture · CQRS/MediatR · Entity Framework Core · PostgreSQL

AI-Powered CV Analyser | GitHub | Live Demo
Developed an API that parses uploaded PDF resumes and evaluates them against job descriptions using OpenAI's GPT-4o-mini, returning structured match scores, skill gaps, and actionable feedback. Implemented PDF text extraction and prompt engineering for consistent JSON output.
ASP.NET Core · OpenAI API · PdfPig · Prompt Engineering

Work Experience

Assistant Manager, MedNxt Medical Eservices, Kolkata, Kolkata
